Top 10

Do you know OMRI?

- 1 OMRI is a 501(c)(3) nonprofit organization** that protects organic integrity through verification and education.
- 2 OMRI does not create standards**, but works to ensure accurate implementation of the official organic standards in the U.S., Canada and Mexico. OMRI does not take a position or lobby for any materials or standards.
- 3 OMRI can review products to the USDA organic regulations, the Canadian Organic Standards and/or the Mexico Organic Products Law.** The standards for input products vary between ruling bodies.
- 4 OMRI listing is completely voluntary.** Product manufacturers from around the world choose OMRI as the gold standard for input review.
- 5 OMRI Listed products meet the standards for use in food production**, but the organic standards do not specifically address yard care. Some products are not intended for a home garden.
- 6 OMRI does not allow any prohibited ingredients** in a final product. OMRI has never allowed sewage sludge as an ingredient.
- 7 OMRI conducts some testing to verify ingredients**, but does not evaluate safety or efficacy, or perform research on product uses.
- 8 OMRI works closely with certifiers and operates similarly**, but OMRI is not a certifier. Only food and fiber products can be "certified organic."
- 9 OMRI Listed products often have "use restrictions,"** meaning they can only be used under certain circumstances when following the organic standards. Restrictions are not usually reflected on the product label, but are included in the *OMRI Products List*[®] and enforced by organic certifiers.
- 10 Every year, OMRI partners with organizations around the world** to provide presentations and training, and to answer technical questions on organic standards for inputs.
