## OMRI Canada for organic production

Why does OMRI use the term “OMRI Listed” rather than “certified organic”?

Only food and fiber products can be certified organic. OMRI lists “input” products, such as fertilizers and pest controls, that are allowed for use in organic production and processing.

Can't I just read the ingredient list on the label?

Labels can be misleading, and it is not easy to tell which ingredients are allowed. OMRI looks at more than just the label, thoroughly reviewing each ingredient and the product manufacturing process.

How should I use an OMRI Canada product?

It is important for organic producers to always check with the operation's certification body before using any new product. Some OMRI Canada products also carry restrictions on their use in certified organic production. Restrictions are clearly indicated on product certificates and in product listings in print and online at OMRI.org.
