Crop Products: Botanical Pesticides

CINNAMON BARK OIL (avt-14388) 1
For use in conjunction with a biorational pest management program. Shall not be the primary method of pest control. The least toxic botanicals shall be used in the least ecologically disruptive way possible. All label restrictions and directions shall be followed, including restrictions concerning crops, livestock, target pests, safety precautions, pre-harvest intervals and worker re-entry. May only be used if the requirements of CAN/CGSB-32.310 subclause 5.6.2 are met, which require the use of organic management practices and mechanical techniques.

CLOVE LEAF ESSENTIAL OIL (avt-14390) 1

For use in conjunction with a biorational pest management program. Shall not be the primary method of pest control. The least toxic botanicals shall be used in the least ecologically disruptive way possible. All label restrictions and directions shall be followed, including restrictions concerning crops, livestock, target pests, safety precautions, pre-harvest intervals and worker re-entry. May only be used if the requirements of CAN/CGSB-32.310 subclause 5.6.2 are met, which require the use of organic management practices and mechanical techniques.

GARLIC OIL (avt-14392) 1

For use in conjunction with a biorational pest management program. Shall not be the primary method of pest control. The least toxic botanicals shall be used in the least ecologically disruptive way possible. All label restrictions and directions shall be followed, including restrictions concerning crops, livestock, target pests, safety precautions, pre-harvest intervals and worker re-entry. May only be used if the requirements of CAN/CGSB-32.310 subclause 5.6.2 are met, which require the use of organic management practices and mechanical techniques.

LEMON GRASS OIL (avt-14394) 1
For use in conjunction with a biorational pest management program. Shall not be the primary method of pest control. The least toxic botanicals shall be used in the least ecologically disruptive way possible. All label restrictions and directions shall be followed, including restrictions concerning crops, livestock, target pests, safety precautions, pre-harvest intervals and worker re-entry. May only be used if the requirements of CAN/CGSB-32.310 subclause 5.6.2 are met, which require the use of organic management practices and mechanical techniques.

PEPPERMINT ESSENTIAL OIL (avt-14398) 1

For use in conjunction with a biorational pest management program. Shall not be the primary method of pest control. The least toxic botanicals shall be used in the least ecologically disruptive way possible. All label restrictions and directions shall be followed, including restrictions concerning crops, livestock, target pests, safety precautions, pre-harvest intervals and worker re-entry. May only be used if the requirements of CAN/CGSB-32.310 subclause 5.6.2 are met, which require the use of organic management practices and mechanical techniques.

ROSEMARY OIL (avt-14400) 1

For use in conjunction with a biorational pest management program. Shall not be the primary method of pest control. The least toxic botanicals shall be used in the least ecologically disruptive way possible. All label restrictions and directions shall be followed, including restrictions concerning crops, livestock, target pests, safety precautions, pre-harvest intervals and worker re-entry. May only be used if the requirements of CAN/CGSB-32.310 subclause 5.6.2 are met, which require the use of organic management practices and mechanical techniques.

THYME OIL (avt-14402) 1

For use in conjunction with a biorational pest management program. Shall not be the primary method of pest control. The least toxic botanicals shall be used in the least ecologically disruptive way possible. All label restrictions and directions shall be followed, including restrictions concerning crops, livestock, target pests, safety precautions, pre-harvest intervals and worker re-entry. May only be used if the requirements of CAN/CGSB-32.310 subclause 5.6.2 are met, which require the use of organic management practices and mechanical techniques.

Livestock Products: Acid Activators for Chlorine Dioxide

BioSentry AquaPrime Activator Chlorine Dioxide Activator and Animal Drinking Water Acidifier (nec-15367) 1
For the generation of chlorine dioxide. Use of resulting chlorine dioxide must comply with CAN/CGSB-32.311. Must not exceed maximum levels for safe drinking water when used in direct contact with organic products and product contact surfaces without a removal event, including: a) for wash water in direct contact with crops or food, or b) in flush water from cleaning irrigation systems, equipment, and storage and/or transport units - application to crops or fields is permitted. May be used up to maximum label rates on organic product contact surfaces provided that a removal event has eliminated the substance prior to organic production.

Livestock Products: Chlorine Compounds

AquaPrime NEOKLOR 7.5% Sodium Chlorite Solution (nec-14749) 1
Must not exceed maximum levels for safe drinking water when used in direct contact with organic products and product contact surfaces without a removal event. May be used up to maximum label rates on organic product contact surfaces provided that a removal event has eliminated the substance prior to organic production.

Livestock Products: Acid Activators for Chlorine Dioxide

SAFE-pHix brand LpH 100 Activator & Adjuvant for Chlorine Dioxide, Biocide, Fungicide, Disinfectant, pH/ORP Adjuster (ath-10686) 1
For the generation of chlorine dioxide. Use of resulting chlorine dioxide must comply with CAN/CGSB-32.311. Must not exceed maximum levels for safe drinking water when used in direct contact with organic products and product contact surfaces without a removal event, including: a) for wash water in direct contact with crops or food, or b) in flush water from cleaning irrigation systems, equipment, and storage and/or transport units - application to crops or fields is permitted. May be used up to maximum label rates on organic product contact surfaces provided that a removal event has eliminated the substance prior to organic production.
